Richmond 2023 Drinking Water Report

Making Safe Drinking Water

Your drinking water comes from a groundwater source: three wells ranging from 106 to 126 feet deep, that draw water from the Cretaceous Regolith aquifer.

Richmond works hard to provide you with safe and reliable drinking water that meets federal and state water quality requirements. The purpose of this report is to provide you with information on your drinking water and how to protect our precious water resources.

Contact Greg Stang, Operator, at 612-756-3549 or gstang@people-service.com if you have questions about Richmond's drinking water. You can also ask for information about how you can take part in decisions that may affect water quality.

The U.S. Environmental Protection Agency sets safe drinking water standards. These standards limit the amounts of specific contami-nants allowed in drinking water. This ensures that tap water is safe to drink for most people. The U.S. Food and Drug Administration regulates the amount of certain contaminants in bottled water. Bottled water must provide the same public health protection as public tap water.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Richmond Monitoring Results

This report contains our monitoring results from January 1 to December 31, 2023.

We work with the Minnesota Department of Health to test drinking water for more than 100 contaminants. It is not unusual to detect contaminants in small amounts. No water supply is ever completely free of contaminants. Drinking water standards protect Min-nesotans from substances that may be harmful to their health.

Learn more by visiting the Minnesota Department of Health's webpage Basics of Monitoring and testing of Drinking Water in Minnesota

(https://www.health.state.mn.us/communities/environment/water/factsheet/sampling.html).

How to Read the Water Quality Data Tables

The tables below show the contaminants we found last year or the most recent time we sampled for that contaminant. They also show the levels of those contaminants and the Environmental Protection Agency's limits. Substances that we tested for but did not find are not included in the tables.

We sample for some contaminants less than once a year because their levels in water are not expected to change from year to year. If we found any of these contaminants the last time we sampled for them, we included them in the tables below with the detection date.

We may have done additional monitoring for contaminants that are not included in the Safe Drinking Water Act. To request a copy of these results, call the Minnesota Department of Health at 651-201-4700 between 8:00 a.m. and 4:30 p.m., Monday through Friday.

Some contaminants are monitored regularly throughout the year, and rolling (or moving) annual averages are used to manage compliance. Because of this averaging, there are times where the Range of Detected Test Results for the calendar year is lower than the Highest Average or Highest Single Test Result, because it occurred in the previous calendar year.

Definitions

- AL (Action Level): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.
- EPA: Environmental Protection Agency
- MCL (Maximum contaminant level): The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology. MCLG (Ma
- contaminant level goal). The level of a cor

Contaminant (Date, if sampled in previous year)	EPA's Ideal Goal (MCLG)	EPA's Limit (MCL)	Highest Average or Highest Single Test Result	Range of Detected Test Results	Violation	Typical Sources
Nitrate	10 ppm	10.4 ppm	0.26 ppm	N/A	NO	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits.
Barium (04/10/19)	2 ppm	2 ppm	0.13 ppm	N/A	NO	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposit.
Mercury (04/10/19)	2 ppb	2 ppb	0.11 ppb	N/A	NO	Erosion of natural deposits; Dis charge from refineries and factories; Runoff from landfills; Runoff from cropland.

Substance (Date, if sampled in previous year)	EPA's Ideal Goal (MCLG or MRDLG)	EPA's Limit (MCL or MRDL)	Highest Average or Highest Single Test Result	Range of Detected Test Results	Violation	Typical Sources
Total Trihalomethanes (TTHMs)	N/A	80 ppb	0.6 ppb	N/A	NO	By-product of drinking water disinfection.
Total Haloacetic Acids (HAA)	N/A	60 ppb	1.3 ppb	N/A	NO	By-product of drinking water disinfection.
Total Chlorine	4.0 ppm	4.0 ppm	0.45 ppm	0.28 - 0.94 ppm	NO	Water additive used to control microbes.

Total HAA refers to HAA5

OTHER SUBSTANC	OTHER SUBSTANCES – Tested in drinking water.											
Substance (Date, if sampled in previous year)	EPA's Ideal Goal (MCLG)	EPA's Limit (MCL)	Highest Average or Highest Single Test Result	Range of Detected Test Results	Violation	Typical Sources						
Fluoride	4.0 ppm	4.0 ppm	0.89 ppm	0.76 - 0.96 ppm	NO	Erosion of natural deposits; Water additive to promote strong teeth.						

Some People Are More Vulnerable to Contaminants in Drinking Water

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. The developing fetus and therefore pregnant women may also be more vulnerable to contaminants in drinking water. These people or their caregivers should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline at 1-800-426-4791.

Learn More about Your Drinking Water

Drinking Water Sources

Groundwater supplies 75 percent of Minnesota's drinking water, and found in aquifers beneath the surface of the land. Surface water supplies 25 percent of Minnesota's drinking water, and is the water in lakes, rivers, and streams above the surface of the land.

Contaminants can get in drinking water sources from the natural environment and from people's daily activities. There are five main types of contaminants in drinking water sources.

- Microbial contaminants, such as viruses, bacteria, and parasites. Sources include sewage treatment plants, septic systems, agricultural livestock operations, pets, and wildlife.
- Inorganic contaminants include salts and metals from natural sources (e.g. rock and soil), oil and gas production, mining and farming operations, urban stormwater runoff, and wastewater discharges.
- Pesticides and herbicides are chemicals used to reduce or kill unwanted plants and pests. Sources include agriculture, urban stormwater runoff, and commercial and residential properties.
- •Organic chemical contaminants include synthetic and volatile organic compounds. Sources include industrial processes and pe troleum production, gas stations, urban stormwater runoff, and septic systems.
- Radioactive contaminants such as radium, thorium, and uranium isotopes come from natural sources (e.g. radon gas from soils and rock), mining operations, and oil and gas production.

The Minnesota Department of Health provides information about your drinking water source(s) in a source water assessment, including:

ting your drinking wate nond is prote

• Contact a Minnesota Department of Health accredited laboratory to get a sample container and instructions on how to submit a sample:

Laboratory Accreditation Environmental Program (https://eldo.web.health.state.mn.us/public/accreditedlabs/labsearch.seam)

The Minnesota Department of Health can help you understand your test results.

- 4. Treat your water if a test shows your water has high levels of lead after you let the water run.
- Read about water treatment units: Point-of-Use Water Treatment Units for Lead Reduction

(https://www.health.state.mn.us/communities/environment/w ater/factsheet/poulead.html)

Rockville 2023 Drinking Water Report

Making Safe Drinking Water

Your drinking water comes from a groundwater source: four wells ranging from 42 to 93 feet deep, that draw water from the Quaternary Buried Artesian aquifer.

Rockville works hard to provide you with safe and reliable drinking water that meets federal and state water quality requirements. The purpose of this report is to provide you with information on your drinking water and how to protect our precious water resources.

Contact Tom Valerius, Water Supervisor/ Operator, at 1-320-251-1664 or water.sewer@rockvillecity.org if you have questions about Rockville's drinking water. You can also ask for information about how you can take part in decisions that may affect water quality.

The U.S. Environmental Protection Agency sets safe drinking water standards. These standards limit the amounts of specific contaminants allowed in drinking water. This ensures that tap water is safe to drink for most people. The U.S. Food and Drug Administration regulates the amount of certain contaminants in bottled water. Bottled water must provide the same public health protection as public tap water.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Rockville Monitoring Results

This report contains our monitoring results from January 1 to December 31, 2023.

We work with the Minnesota Department of Health to test drinking water for more than 100 contaminants. It is not unusual to detect contaminants in small amounts. No water supply is ever completely free of contaminants. Drinking water standards protect Minnesotans from substances that may be harmful to their health.

taminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

- MRDL (Maximum residual disinfectant level): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants
- MRDLG (Maximum residual disinfectant level goal): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
- NA (Not applicable): Does not apply.
 ppt (parts per trillion): One part per trillion is like one drop in one trillion drops of water, or about one drop in an Olympic sized swimming pool. ppt is the same as nanograms per liter (ng/l).
- ppb (parts per billion): One part per billion in water is like one drop in one billion drops of water, or about one drop in a swimming pool. ppb is the same as micrograms per liter (μ g/l). • **ppm (parts per million):** One part per million is like one drop
- in one million drops of water, or about one cup in a swimming pool. ppm is the same as milligrams per liter (mg/l).
- **PWSID**: Public water system identification.

Contaminant (Date, if sampled in previous year)	EPA's Ideal Goal (MCLG)	EPA's Action Level	90% of Results Were Less Than	Number of Homes with High Levels	Violation	Typical Sources
Lead	0 ppb	90% of homes less than 15 ppb	2.32 ppb	0 out of 10	NO	Corrosion of household plumbing.
Copper	0 ppm	90% of homes less than 1.3 ppm	0.26 ppm	0 out of 10	NO	Corrosion of household plumbing.

- Nearby threats to your drinking water sources;
- How easily water and pollution can move from the surface of the land into drinking water sources, based on natural geology and the way wells are constructed.

Find your source water assessment at Source Water Assessments (https://www.health.state.mn.us/communities/environment/water/s wp/swa) or call 651-201-4700 between 8:00 a.m. and 4:30 p.m., Monday through Friday.

Lead in Drinking Water

You may be in contact with lead through paint, water, dust, soil food, hobbies, or your job. Coming in contact with lead can cause serious health problems for everyone. There is no safe level of lead. Babies, children under six years, and pregnant women are at the highest risk.

Lead is rarely in a drinking water source, but it can get in your drinking water as it passes through lead service lines and your household plumbing system. Richmond is responsible for providing high quality drinking water, but it cannot control the plumbing materials used in private buildings.

Read below to learn how you can protect yourself from lead in drinking water.

- 1. Let the water run for 30-60 seconds before using it for drinking or cooking if the water has not been turned on in over six hours. If you have a lead service line, you may need to let the water run longer. A service line is the underground pipe that brings water from the main water pipe under the street to your home.
- You can find out if you have a lead service line by contacting your public water system, or you can check by following the steps at: https://www.mprnews.org/story/2016/06/24/npr-findlead-pipes-in-your-home
- The only way to know if lead has been reduced by letting it run is to check with a test. If letting the water run does not reduce lead, consider other options to reduce your exposure
- 2. Use cold water for drinking, making food, and making baby formula. Hot water releases more lead from pipes than cold water.
- 3. Test your water. In most cases, letting the water run and using cold water for drinking and cooking should keep lead levels low in your drinking water. If you are still concerned about lead, arrange with a laboratory to test your tap water. Testing your water is important if young children or pregnant women drink your tap water.

Learn more by visiting the Minnesota Department of Health's webpage Basics of Monitoring and testing of Drinking Water in Minnesota

(https://www.health.state.mn.us/communities/environment/water/f actsheet/sampling.html).

How to Read the Water Quality Data Tables

The tables below show the contaminants we found last year or the most recent time we sampled for that contaminant. They also show the levels of those contaminants and the Environmental Protection Agency's limits. Substances that we tested for but did not find are not included in the tables.

We sample for some contaminants less than once a year because their levels in water are not expected to change from year to year. If we found any of these contaminants the last time we sampled for them, we included them in the tables below with the detection date.

We may have done additional monitoring for contaminants that are not included in the Safe Drinking Water Act. To request a copy of these results, call the Minnesota Department of Health at 651-201-4700 between 8:00 a.m. and 4:30 p.m., Monday through Friday.

Some contaminants are monitored regularly throughout the year, and rolling (or moving) annual averages are used to manage compliance. Because of this averaging, there are times where the Range of Detected Test Results for the calendar year is lower than the Highest Average or Highest Single Test Result, because it occurred in the previous calendar year.

Fluoride	4.0 ppm	4.0 ppm	0.59 ppm	0.39 - 0.73 ppm	NO	Erosion of natural deposits; Water additive to promote strong teeth.						

Potential Health Effects and Corrective Actions (If Applicable)

Fluoride: If your drinking water fluoride levels are below the optimal concentration range of 0.5 to 0.9 ppm, please talk with your dentist about how you can protect your teeth and your family's teeth from tooth decay and cavities. For more information, visit: MDH Drinking Water Fluoridation (https://www.health.state.mn.-us/communities/environment/water/com/fluoride.html). Fluoride is nature's cavity fighter, with small amounts present naturally in many drinking water sources. There is an overwhelming weight of credi ble, peer-reviewed, scientific evidence that fluoridation reduces tooth decay and cavities in children and adults, even when there is availability of fluoride from other sources, such as fluoride toothpaste and mouth rinses. Since studies show that optimal fluoride levels in drinking water benefit public health, municipal community water systems adjust the level of fluoride in the water to an optimal concentration between 0.5 to 0.9 parts per million (ppm) to protect your teeth. Fluoride levels below 2.0 ppm are not expected to increase the risk of a cosmetic condition known as enamel fluorosis.

Some People Are More Vulnerable to Contaminants in Drinking Water

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. The developing fetus and therefore pregnant women may also be more vulnerable to contaminants in drinking water. These people or their caregivers should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline at 1-800-426-4791.

COUNTY OF STEARNS DISTRICT COURT

Learn More about Your Drinking Water

Drinking Water Sources

Groundwater supplies 75 percent of Minnesota's drinking water, and found in aquifers beneath the surface of the land. Surface water supplies 25 percent of Minnesota's drinking water, and is the water in lakes, rivers, and streams above the surface of the land

Contaminants can get in drinking water sources from the natural environment and from people's daily activities. There are five main types of contaminants in drinking water sources.

- Microbial contaminants, such as viruses, bacteria, and parasites. Sources include sewage treatment plants, septic systems, agricultural livestock operations, pets, and wildlife.
- Inorganic contaminants include salts and metals from natural sources (e.g. rock and soil), oil and gas production, mining and farming operations, urban stormwater runoff, and wastewater discharges.
- Pesticides and herbicides are chemicals used to reduce or kill unwanted plants and pests. Sources include agriculture, urban stormwater runoff, and commercial and residential properties.
- •Organic chemical contaminants include synthetic and volatile organic compounds. Sources include industrial processes and petroleum production, gas stations, urban stormwater runoff, and septic systems.
- Radioactive contaminants such as radium, thorium, and uranium isotopes come from natural sources (e.g. radon gas from soils and rock), mining operations, and oil and gas production.

The Minnesota Department of Health provides information about your drinking water source(s) in a source water assessment, including:

- How Rockville is protecting your drinking water source(s);
- Nearby threats to your drinking water sources;

• How easily water and pollution can move from the surface of the land into drinking water sources, based on natural geology and the way wells are constructed.

Find your source water assessment at Source Water Assessments (https://www.health.state.mn.us/communities/environment/water/s wp/swa) or call 651-201-4700 between 8:00 a.m. and 4:30 p.m., Monday through Friday.

Lead in Drinking Water

You may be in contact with lead through paint, water, dust, soil, food, hobbies, or your job. Coming in contact with lead can cause serious health problems for everyone. There is no safe level of lead. Babies, children under six years, and pregnant women are at the highest risk.

Lead is rarely in a drinking water source, but it can get in your drinking water as it passes through lead service lines and your household plumbing system. Rockville is responsible for providing high quality drinking water, but it cannot control the plumbing materials used in private buildings.

Read below to learn how you can protect yourself from lead in drinking water.

1. Let the water run for 30-60 seconds before using it for drinking or cooking if the water has not been turned on in over six hours. If you have a lead service line, you may need to let the water run longer. A service line is the underground pipe that brings water from the main water pipe under the street to your home.

ta, Minnesota, for the formal probate of an instrument purporting to be the Will of the Decedent dated, July 10, 2014, ("Will"), and for the appointment of Kelly Etienne, whose address is 4366 Coolidge Ave, St. Louis Park, MN, 55424 as Personal Representative of the Estate of the Decedent in an UNSUPERVISED administration. Any objections to the petition must be filed with the Court prior to or raised at the hearing. If proper and if no objections are filed or raised, the Personal Representative will be appointed with full power to administer the Estate including the power to collect all assets, to pay all legal debts, claims, taxes and expenses, to sell real and personal property, and to do all necessary acts for the Estate.

Notice is also given that (subject to Minnesota Statutes section 524.3-801) all creditors having claims against the Estate are required to present the claims to the Personal Representative or to the Court Administrator within four months after the date of this Notice or the claims will be barred.

> Summons Without Real Estate

In Re the Marriage of:

Elizabeth Anne Wagner Petitioner

and

(1) Neither party may dispose of any assets except (a) for the necessities of life or for the necessary generation of income or preservation of assets, (b) by an agreement of the parties in writing, or (c) for retaining counsel to carry on or to contest this proceeding.

(2) Neither party may harass the other party.

(3) All currently available insurance coverage must be maintained and continued without change in coverage or beneficiary designation.

(4) Parties to a marriage dissolution proceeding are encouraged to attempt alternative dispute resolution pursuant to Minnesota law. Alternative dispute resolution includes mediation, arbitration and other processes as set forth in the district court rules. You may contact the court administrator about resources in your area. If you cannot pay for mediation or alternative dispute resolution, in some counties, assistance may be available to you through a nonprofit provider or a court program. If you are a victim of domestic abuse or threats as defined in Minnesota Statutes, Chapter 518B, you are not required to try mediation and you will not be penalized by the court in later proceedings.

OF THESE PROVISIONS, YOU WILL BE SUBJECT TO SANCTIONS BY THE COURT

NOTICE OF PARENT EDUCATION PROGRAM REQUIREMENTS

Under Minnesota Statutes, Section 518.157, in a contested proceeding involving custody or parenting time of a minor child, the parties must begin participation in a parent education program that meets minimum standards promulgated by the Minnesota Supreme Court within 30 days after the first filing with the court. In some Districts, parenting education may be required in all custody or parenting proceedings. You may contact the District Court Administrator for additional information regarding this requirement and the availability of parent education programs.

STEARNS COUNTY **BOARD OF COMMISSIONERS** NOTICE OF INTENT TO ENACT AN ORDINANCE

Pursuant to Minnesota Statutes Chapter 375, notice is hereby given that the Stearns County Board of Commissioners intends to consider the enactment of the following Ordinances:

Stearns County Ordinance Number 671 shall be considered for enactment at a meeting to be held on April 30, 2024 after 9:00am in the County Board Room, Stearns County Administration Center, 705 Courthouse Square, St. Cloud, Minnesota. The agenda will be available approximately 2 business days prior to the meeting on the Stearns County website on the Meetings on Demand page at https://stearnscounty.civicweb.net/portal/ or by contacting Stearns County Environmental Services.

The general purpose and subject matter of Ordinance Number 671 is as follows:

It amends Ordinance Number 439 by rezoning approximately 86.2 acres from the Agricultural 40 (A-40) zoning district to the Residential 10 (R-10) zoning district. The property is part of the W1/2 SE1/4 and part of the NW1/4 SW1/4 lying southwest of the County Road 2/County Road 4 intersection in Section 23 of St. Wendel Township (125/29).

A copy of the proposed Ordinance is on file at the Stearns County Environmental Services Department or by calling 320-656-3613.

Thomas Matthew Wagner Respondent

THE STATE OF MIN-NESOTA TO THE ABOVE-NAMED RESPONDENT:

WARNING: Your spouse has filed a lawsuit against you for dissolution of your marriage. A copy of the paperwork regarding the lawsuit is served on you with this summons. This summons is an official document from the court that affects your rights. Read this summons carefully. If you do not understand it, contact an attorney for legal advice.

1. The Petitioner (your spouse) has filed a lawsuit against you asking for a dissolution of your marriage (divorce). A copy of the *Petition* for Dissolution of Marriage is attached to this Summons. There should also be a copy of Petitioner's Financial Affidavit attached.

2. You must serve upon Petitioner and file with the Court a written Answer to the Petition for Dissolution of Marriage and your Financial Affidavit. You must pay the required filing fee. Answer forms and the Financial Affidavit form are available from the Court Administrator's office. You must serve your Answer and Financial Affidavit upon Petitioner within thirty (30) days of the date you were served with this Summons, not counting the day of service. If you do not serve and file your Answer and Financial Affidavit, the Court may give your spouse everything he or she is asking for in the Petition for Dissolution of Marriage.

3. This proceeding does not involve real property.

NOTICE OF **TEMPORARY** RESTRAINING PROVISIONS
